HEAVY DUTY CUTTING & HIGH ACCURACY

MAIN SPINDLE

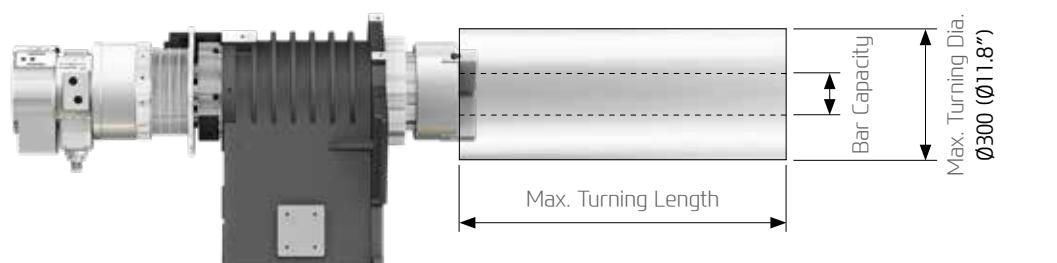

Spindle for Heavy Cutting

The main spindle is designed with the same structure often found in larger sized machines. The combination of double cylindrical roller bearings and angular contact ball bearings leads to excellent heavy duty cutting performance.

Also, machining performance is enhanced by applying **ribstar belt** to minimize noise and belt slipping problems. The spindle is designed with a **labyrinth structure** to minimize possible bearing damage from coolant and to improve machining stability.

C-Axis Control

C-axis of TC-Y Series can be controlled to 0.001° which makes it possible to process various shapes.

Max. Turning Length	Standard Bed	Long Type Bed	Bar Capacity
6 inch Spindle	309 mm (12.2")	529 mm (20.8")	Ø51 mm (Ø2")
8 inch Spindle	288 mm (11.3")	508 mm (20")	Ø65 mm (Ø2.6")

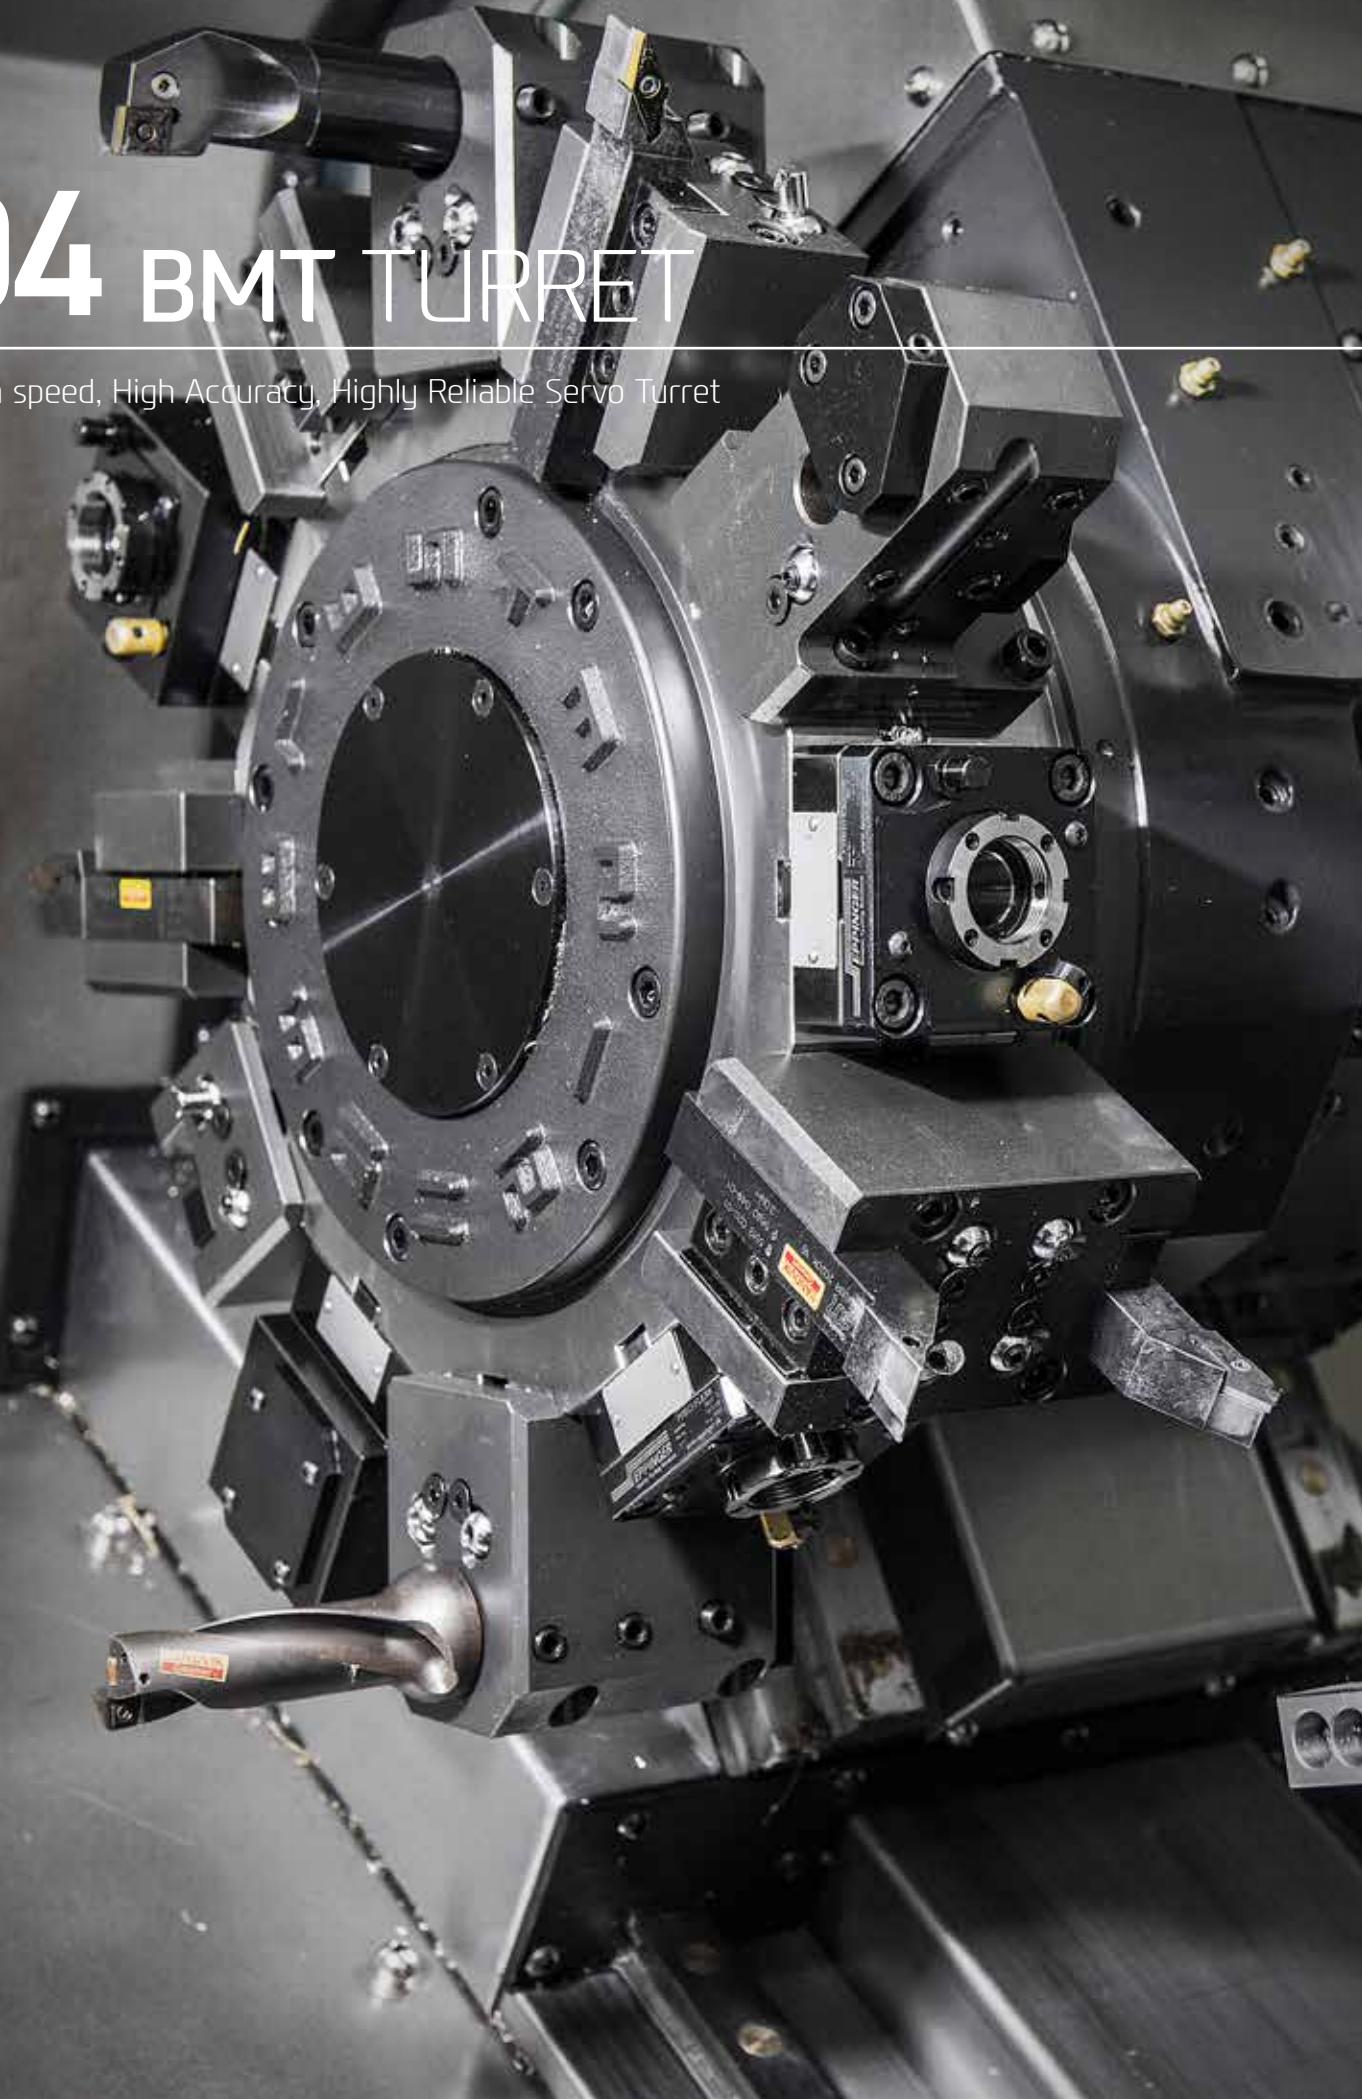

SUB SPINDLE ('SY' Type)

The Belt-type sub spindle is designed to minimize thermal displacement during the continuous machining, offering from the heavy-duty cutting to the high-speed machining. When the main spindle cutting is completed, the sub spindle rotation is synchronized with the main spindle allowing the workpiece to be transferred to the sub spindle, and machining can begin on the back side of the workpiece.

04 BMT TURRET

High speed, High Accuracy, Highly Reliable Servo Turret

VARIOUS DRIVEN PRECISION BMT TOOL HOLDERS

TURRET

Mill Turret (BMT45)

The BMT turret secures the tool with four bolts and key on the tool mounting surface of the turret, making it possible to powerfully fix the tool, ensuring high reliability in rigidity and precision.

- ◎ Speed (rpm) : 6,000 r/min
- ◎ Collet Size : ER20 / Ø13 (Ø0.51")
- ◎ Indexing Time : 0.15 sec

STRAIGHT MILLING HEAD

ANGULAR MILLING HEAD

Mill Tool Holder

Machining capability has increased with the addition of straight milling head tool holder.

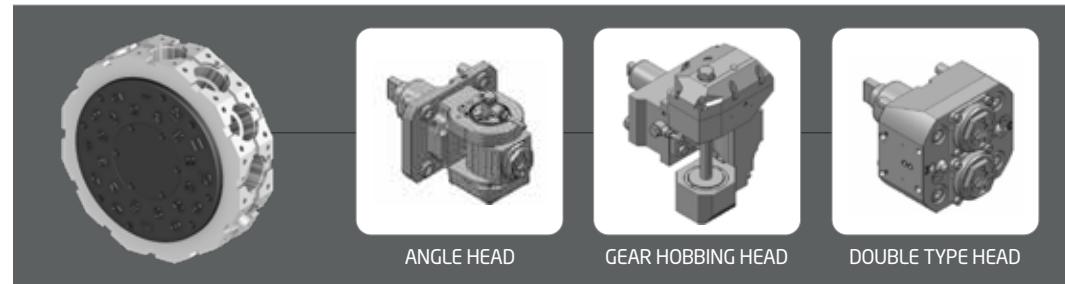

Increased Rotating Tools

Straight and angular milling haed 1ea > 2ea, respectively

SPECIAL TOOL

OPTION

With the Y-axis, the TC-Y Series can process high value-added products using a variety of rotating tools. In particular, there is a multi-holder for attaching a variety of tools to one holder, and an eccentric rotary tool for handling eccentric parts without additional axis travel, which can realize integration of process with one machine.

❖ Consultation needed when ordering these options.

05 USER CONVENIENCE

General

Programmable Quill Tailstock

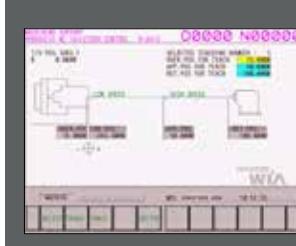

TC22LYA

Hydraulic NC Tailstock

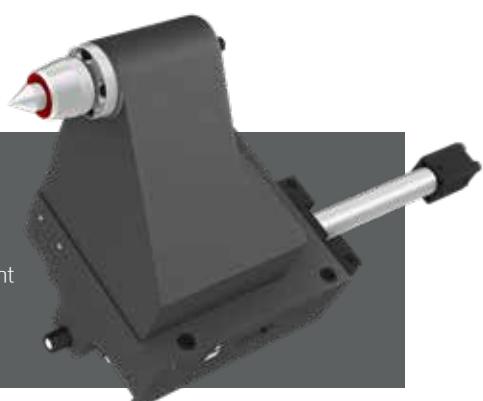

- › A structure that moves by fixing the tailstock to the turret
- › After fixing the tailstock, the quill operated by hydraulic pressure advances to stabilize the material
- › Automation configuration error due to interference with turret during configuration of automation

- › Structure in which the tailstock moves independently from the turret (position control : 0.1mm)
- › Stabilization of tailstock body hydraulic pressure
- › Turret moves independently while the tailstock moves to reduce machining setup time
- › TC22LYA standard (MT#4 live center application)
